Three banners, one identity

Three different banners, each doing a different job: B-1 is read from the road at speed, B-2 is read standing at the gate, B-3 runs the long stretch of fence. same pattern, cut from the clinic's sign post: BCM over the white field, MEDICAL CENTRE knocked out of navy, EDDWALIRO in white on the red block, Open 24 Hrs between the arrows, then the numbers, the motto and BUSSABALA in the navy foot strip.

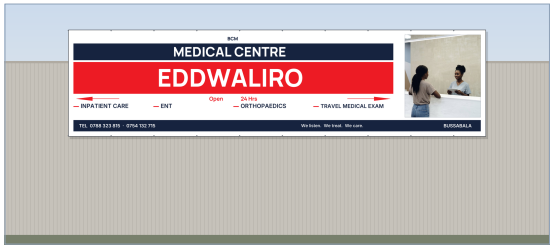

B-1 — THE ROAD BANNER

4.9 M × 1.2 M · 4877 × 1245 MM

B-2 — THE SERVICES BANNER

4.9 M × 1.2 M · 4877 × 1245 MM

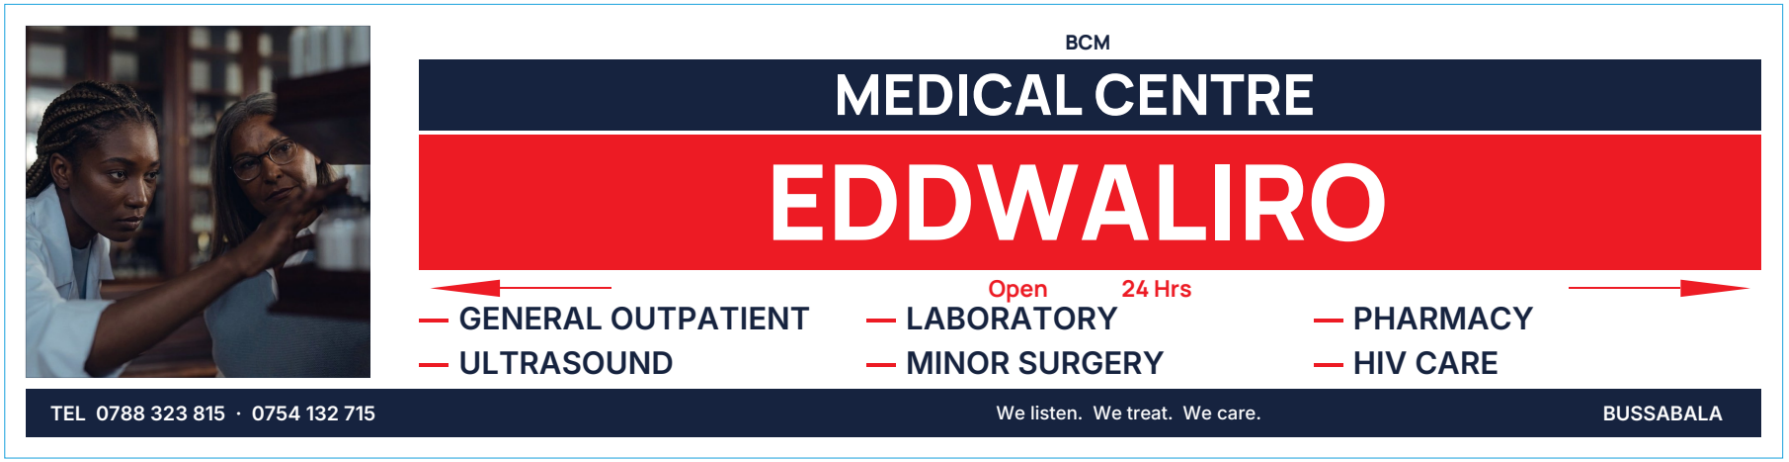

B-3 — THE LONG BANNER

4.9 M × 1.2 M · 4877 × 1245 MM

B-1 — The road banner

Read at speed, from the road. Photograph on the left, the name on the right.

HOW IT IS SET

- Service list: general outpatient, laboratory, pharmacy, ultrasound, minor surgery, hiv care.
- Hem and eyelet zone: 60 mm clear all round — no type, no faces.
- Bleed 10 mm, crop marks in the slug. Plot at 100 %, never scale.

PHOTOGRAPHS

- PH-06 — Pharmacists examining medicine on dispensary shelving, 942 × 962 mm at 22 ppi (FAIL).
- FAIL is measured on the working file. At this length the photograph is placed large, so B-3 must be printed from the full-resolution original, or the frame dropped — say which.
- Colour-retouched so the people read Black African; licence on page 6.

B-2 — The services banner

Read standing still, at the gate. The list does the work, two photographs carry it.

HOW IT IS SET

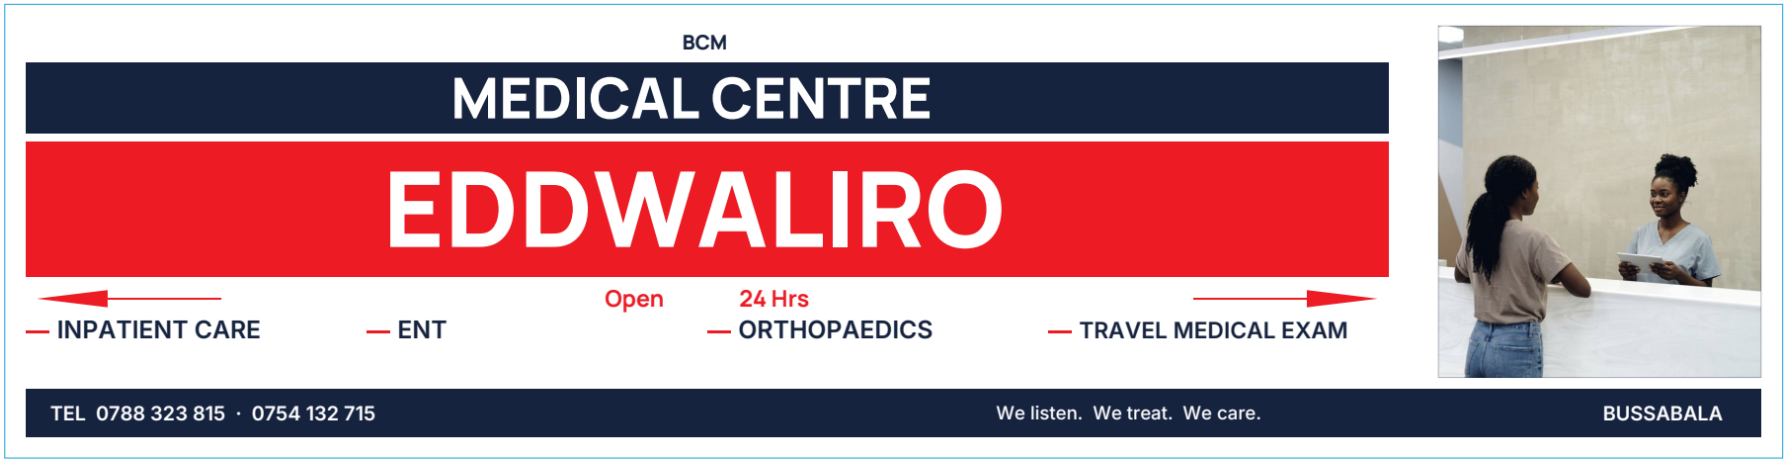

- Service list: paediatrics, immunisation, antenatal & postnatal, obs & gyn, family planning, eye services.
- Hem and eyelet zone: 60 mm clear all round — no type, no faces.
- Bleed 10 mm, crop marks in the slug. Plot at 100 %, never scale.

PHOTOGRAPHS

- PH-05 — Laboratory technician at a trinocular microscope, 440 × 463 mm at 46 ppi (FAIL).
- PH-20 — Pharmacist arranging bottles in a dispensary cabinet, 440 × 463 mm at 46 ppi (FAIL).
- FAIL is measured on the working file. At this length the photograph is placed large, so B-3 must be printed from the full-resolution original, or the frame dropped — say which.
- Colour-retouched so the people read Black African; licence on page 6.

B-3 — The long banner

The long run along the fence: the name set as large as it will go, one photograph at the right hand end, one line of services.

HOW IT IS SET

- Service list: inpatient care, ent, orthopaedics, travel medical exam.
- Hem and eyelet zone: 60 mm clear all round — no type, no faces.
- Bleed 10 mm, crop marks in the slug. Plot at 100 %, never scale.

PHOTOGRAPHS

- PH-01 — Receptionist assisting a patient at a modern reception desk, 885 × 962 mm at 24 ppi (FAIL).
- FAIL is measured on the working file. At this length the photograph is placed large, so B-3 must be printed from the full-resolution original, or the frame dropped — say which.
- Colour-retouched so the people read Black African; licence on page 6.

Production specification

MATERIAL — CONFIRM WITH THE PRINTER

- 510 g/m² PVC banner, matte, printed at 720–1440 dpi. Industry-typical for a fence banner of this size — not a quotation.
- 40 mm welded hem all round, eyelets at 500 mm centres, stainless or brass. The artwork keeps 60 mm clear of the trim so nothing important is hemmed away.
- Finish: matte, not gloss. Gloss mirrors the sky and kills the navy.
- Fix at every eyelet, not every second one: a 4.9 m banner sails in wind and will tear at the corners if it is tied off at four points only.

BANNER	TRIM W MM	TRIM H MM	W M	H M	AREA
B-1	4877	1245	4.88 M	1.24 M	6.07 M²
B-2	4877	1245	4.88 M	1.24 M	6.07 M²
B-3	4877	1245	4.88 M	1.24 M	6.07 M²

FILE SETUP

- One PDF per banner, drawn 1 : 1 in millimetres, 10 mm bleed, crop marks in the slug. CMYK conversion is left to the printer's profile.
- Type is live text in embedded fonts — no outlining needed, but the printer may outline it.
- Photographs are placed at the resolution the working files allow and are recorded per banner on the previous pages. Before print, the retouch is repeated on the full-resolution originals (Pexels links in the licence table) or the clinic's own team is photographed.

BEFORE PRINT

- Confirm the size with the fence: all three banners are 16 ft × 49 in — 4876.8 × 1244.6 mm — the client's measurement of 2026-11-07. Three of them need about 15.6 m of fence with gaps.
- Confirm the spelling EDDWALIRO, and that BCM Medical Centre is the wording that goes on the fence.
- The service lists are split across the three banners so no service repeats. Tell us if any list must change.
- The monogram is a recreation, not BCM's official logo.

Photographs and licence

All photography is licensed from Pexels under its free licence: commercial use, modification and no attribution required — credited here as good practice. Every frame used has been colour-retouched so the people read Black African; the retouch is recorded against each asset below. The people are models, not BCM staff or patients.
