ONE-WAY VISION FILM

Eight panes across the four glass leaves of the BCM Medical Centre frontage — dental, paediatrics, laboratory, physiotherapy, pharmacy, antenatal, reception and a services directory — designed for perforated film and rebuilt from the client's own shopfront photograph.

DAYLIGHT — PRINTED FACE TOWARDS THE STREET

FRONTAGE ELEVATION — ALL EIGHT PANES IN PLACE

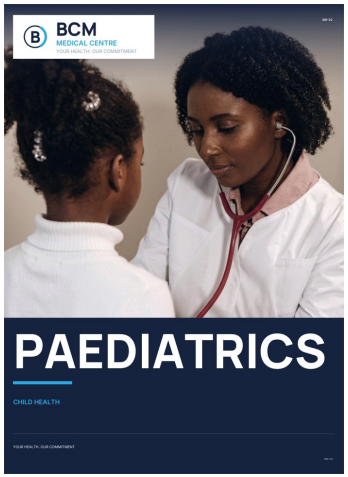

The eight panes

Every pane keeps one architecture: photograph to the head, navy caption block at the foot, service name at a fixed cap height, BCM Medical Centre lockup top-left, slogan and telephone at the base. The directory pane carries no photograph at all — it reads fastest from the street.

After dark, and the brand it carries

NIGHT — INTERIOR LIGHTING BEHIND THE FILM

BRAND, AS SUPPLIED

The palette, slogan and telephone numbers come straight off the client's fascia sign and existing boards. Nothing has been invented.

#16233F	#2BA9E0	#E8EEF4

TYPE — MANROPE DISPLAY / INTER TEXT

- Service names set at 54–66 mm cap height, weight 800 — sized to survive a 44% perforation — nearly half the surface is holes.
- Labels at 8–9 mm, Inter 600 with 2.6 tracking; nothing live below 6 mm.
- Panels are readable from the pavement and from a moving car; the directory pane is legible at 8 m.
- Telephone numbers appear at 6.2 mm cap height on every pane — small enough not to shout, large enough to be photographed.
